ODMS Detex Label Example

All boxes will continue to be labelled with one detex label. The physical label itself shall not change, however the text on the label will be presented in a different format. The current 'S' number reference will be replaced with the 'Run ID' number and a 2D barcode, as shown below. The Run ID is the unique process reference within the ODMS system for that specific batch process. The Run ID number is also referenced on the certificate of processing providing the link between the process run and certificate
