

Venting? Helapet have the solution

Choose from our range of bacteria-retentive vented needles and spikes.

Vented Needles

Needle-Free Vented Spikes

When it comes to the producing sterile preparations, we understand that the choice of compounding device is not all that straight forward. Vial type and size, viscosity of the medication and chemical compatibility are a few things to consider when selecting the right device for the job.

Helapet is your one-source-stop for vented admixture solutions within aseptic units, cleanrooms and other controlled environments. Our broad line of cannula and needle-free products caters for different preferences required for the sterile aspiration and manipulation of complex medications including cytotoxics.

Vented Needles

When precision, accuracy and easy vial penetration is a must, Helapet's vented needle range are designed to help ensure the maximum extracted dose from small to larger capacity vials. Headed up by our top selling PharmaVent® Needlevent, our selection of specialty devices offer multiple features to best suit their intended use, including capped luer lock connections to reduce cross contamination, larger diameter filters for improved flow rates and integrated particulate filtration for the removal of debris.

Needle-Free Vented Spikes

Manufactured from robust polypropylene, Helapet's vented dispensing spikes have larger channels allowing for the effortless withdrawal of viscous solutions. Available as a universal vented spike or shrouded vial adapter, all our needle-free vented products have high performance 0.2 micron bacterial-retentive filter to prevent vial contamination whilst maintaining sterile integrity.

Try Before You Buy

Our try before you buy service allows you to trial any of our sterile dispensing devices to ensure you have right solution. Either visit our homepage helapet.co.uk and click on "[Order Free Samples](#)" or request samples via the product webpage. For further details on specific products, a complete technical datasheet is available to download.

Other Sterile Admixture Products to Consider -

- i. **Sterile Multi-Pack Syringes**

Using bulk packed sterile syringes in high volume aseptic manufacturing units not only offers economic advantage, but the convenience and cost savings of reduced packaging waste, consumables and labour time. Several sizes of luer lock syringe are available in packs of 5's, 10's, 25's and 50's conveniently bulk packed and terminally sterilised for swift and efficient transfer and use. We also offer bespoke pack solutions including double / triple-bagged packaging and capped syringe tips, designed to meet specific requirements for any aseptic production process.

- ii. **Sterile Luer Lock Connector**

Facilitating the safe, contaminant-free transfer of viscous fluids from a master syringe into smaller doses, our Female Luer Lock Connector has an ergonomic, rounded design with a spacious pathway to facilitate rapid transfer of fluids between syringes.

- iii. **Luer Lock Sterile Syringe Caps**

Practical, cost-effective capping solutions, microbiologically and physically integrity tested for assured closure of luer lock syringes once they have left the sterile preparation area. Options include our popular Combi-Cap® with a versatile double-sided male and female luer lock fastening. Our Tamper-Evident IV Syringe Cap grants secure transportation of syringes, allowing clinical professionals to visually identify any evidence of tampering before patient administration.
