

# Raised Access Flooring

Combined Safety Solutions work with a raised access flooring company who install raised access flooring in projects throughout London. This allows access for other companies to complete work on top of their flooring. This is where Combined Safety Solutions help the company to conduct a safe working environment and complete works safely.

Audits are completed for this company to prove they are completing work in safe working conditions. As a company Combined Safety Solutions help them to maintain all training that is required for operatives, make sure all relevant Toolbox talks are completed, as well as visit sites to meet any Health and Safety Requirements. Watching the progress of the raised access flooring on sites is something that is rewarding for both Combined Safety Solutions and Connaught.

Any issues the company may have when it comes to Health and Safety are directly addressed to Combined Safety Solutions and this is where as a company we help to solve any issues in a quick efficient manner so they can maintain the values and standards of the company.
