

Further Investment in Large Part Coating

Plastic Coatings Ltd are excited to confirm that we are investing in further new coating plant and facilities.

In the last few years, we've seen increasing demand for the coating of large parts. We installed a dedicated [large parts coating facility](#) for traditional powder coating and high performance (PTFE etc) wet painting requirements. This facility has a work envelope of 6m x 4m x 3m and has handled some very complex projects.

But we continue to see to demand for longer and heavier parts, therefore we're installing a completely new facility that can handle much larger and heavier components again, this will complement the existing plants that we have [on site here in Kingswinford](#).

We will confirm further details when the installation is complete in early April, but in the meantime, why not [contact us](#) to discuss your project requirements and see how Plastic Coatings Ltd range of products and services can enhance your products?
