

Sports Car Crashes

Project Brief

We are working with our client [Niche projects](#) to make something really exciting. We love a prop making challenge here at Spur Creative. Niche Projects came to us at the last minute to ask if we could help as they'd been let down by another supplier and with our can-do attitude, we

said yes. As this is an exciting [prop making](#) project to work on, we were only too happy to get involved. For all you car lovers out there, can you see what this prop is going to be?

Putting the car body parts together

We have now fitted the main body parts together and are working on the metal frame inside. This needs to be strong enough to hold the weight of the finished car, as we will be suspending it somewhere...Watch this space for more updates on the prop making.

Ready to fibreglass the windscreen

We now have the windscreen sculpted in polystyrene and placed in the Lamborghini ready for us to hard-coat with fibreglass. The car body has been primed white ready for its colour to be sprayed on later in the week.

Just another brick in the wall

What will be crashing through this wall built using MDF and polystyrene sculpted bricks?

The wall is built to come apart in sections so that we can easily install it onsite. The majority of the bricks were cut out of MDF sheets and those bricks exploding out from the wall were sculpted in polystyrene with a hard coat resin finish. Then we painted it ready for the grand finale. See the finished product [here](#)
