Infrared Gas Sensors for Enhanced Refrigerant Safety and Compliance

Process Sensing Technologies (PST), a leading global supplier of measurement and monitoring systems for process-critical applications, is proud to announce the successful completion of UL60355-2-40 certification for the **Axiom A2L refrigerant detector**.

Designed and manufactured by Dynament, a PST brand and world leader in gas sensing innovation, the Axiom A2L detector is poised to revolutionize the detection of A2L gases such as R32 and R454 blends.

This certification marks a significant milestone in supporting new regulations aimed at reducing the global warming potential associated with unexpected leakages and emissions of refrigerants used in air conditioners and heat pumps.

The Axiom A2L detector utilizes state-of-the-art nondispersive infrared (NDIR) technology, offering unparalleled capabilities to support OEM integration efforts in meeting regulatory requirements. Key features of the Axiom detector include:

- **Fast Response:** Detects leaks in less than 10 seconds.
- **Multiple Output Options:** Analog (voltage, milliamp, open collector) and digital (Modbus) output options for enhanced flexibility.
- **Wide Input Voltage Range:** Operates within a voltage range spanning from 5 volts to 24 volts of direct current (DC) power input.
- **Onboard Heater:** Equipped with an onboard heater to eliminate the potential impact of condensation, ensuring reliable performance in varied environmental conditions.
- **Longevity:** Offers a 15-year life span with no required field calibrations, providing cost-effective and hassle-free operation.
- **Reliability:** Failsafe operation and immunity to poisoning ensure dependable performance over time.
- **Compact Size:** Measuring 1 x 2 x 3 inches with integrated mounting tabs, the detector can be conveniently placed anywhere to support leak detection.
- **Diagnostic Support:** PC diagnostic tool facilitates service and maintenance support.

Kevin McKeigue, VP of the PST Sensor Division, commented on this significant accomplishment, stating, "Dynament has been at the forefront of NDIR sensing technologies for over two decades, and their expertise is well-aligned with this crucial environmental initiative. The Axiom represents a significant advancement in gas measurement innovations for the HVAC industry, offering a comprehensive and easy-to-integrate solution to meet evolving industry requirements."

About Process Sensing Technologies

Process Sensing Technologies (PST) provides an unmatched suite of instruments, analyzers, and sensors for precision measurements and monitoring in highly demanding end markets. These range from pharmaceutical/ life sciences, specialty gases, semiconductors, O&G, petrochemicals, and power to gas detection, food, and beverage, and building automation.

PST brings together well-established brands, each of which is trusted for the precision and reliability of its products, strong innovation, and a singular focus on customer service. With a history of development and innovation starting in 1965 and continuing to the present day, we look forward to many more milestones.
