The N6 | 0i Digital Ink-jet label press High Print Quality at Flexo Speeds

Highest opacity digital white

The **N6 | 0i White** provides the highest opacity (at 72%) screen-like, high impact appearance, but with the operational flexibility of a digital process.

Make your labels stand out from the crowd

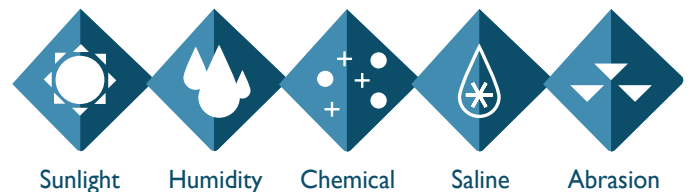

Add value - Offer premium product branding with enhanced shelf appeal.

- Competitive advantage - unique textured printing capability
- Creative designs - textured designs on all, or part of the label
- Cost effective - can be used as a replacement for screen printing or as a replacement for textured substrates
- Personalisation - Pictures, barcodes QR codes & variable data

Colour Range

In today's fast evolving retail marketplace, the importance of colour in product packaging cannot be over-emphasised. The **N6 | 0i** provides brand owners and designers the scope to create designs with a far wider colour gamut cost-effectively.

Provides high resistance to:

Adhesion & Abrasion

Although vital for industrial applications, adhesion and abrasion are important for all printing applications to ensure the finished goods survive the journey to shelf in optimum condition and then offer the longest possible shelf life. Tested using the industry standard cross hatch and tape tests, the Domino UV90 inks maintain full adhesion on the widest range of substrates. The degree of adhesion removes the need to pre-coat or varnish most substrate types, saving time and money.
