

Radio Nurse Call leads the way!

With today's technology it is possible to upgrade an old Nurse call system in under a week. Gone are the days of engineers installing cables and being on site for weeks, as with the new Radio Nurse Call a call point can be fitted in a resident's room in minutes.

Flexibility is another benefit, as units can easily be repositioned when necessary, and multiple displays can be positioned around the care home to ensure staff never miss a call.

Southern Care Maintenance Ltd, SCM, was established in 1987, and are a specialist independent company for the Service and Maintenance of Nurse call, Fire and Nursing equipment. They have many years experience in both fitting and servicing Nurse Call systems covering Kent, Sussex, Surrey, Essex, and South London.

This month they are launching **mySCM**, a new online customer portal free of charge to all service contract customers, so that they can access service records, certificates and invoices securely 24/7.

For more information see southerncare.co.uk and follow the link to the Nurse Call page. You can also download a case study of a customer using Radio Nurse call or ring 01580 890089.
