

Arrival of our second fully automated robotic die casting cell

23 June 2023

Category: [General News](#)

R D Castings are pleased to announce the arrival of their second fully automated, robotic die castings cell. This will allow RDC to improve the quality of products produced, due to the latest closed loop injection systems employed on the machine, opening up new markets that could not have been possible previously. The new cell is expected to increase output by as much as 40/60%, on the outgoing equipment. It will also allow RDC to run 24/7 if required, opening up opportunities in securing much larger contracts in the future.

The machine is also very environmentally friendly, with the advantage of an Eco Drive Injection system, and many other energy saving technologies, resulting in 70% reduced electrical consumption.

RDC are pleased to announce that this project was helped with a grant secured from the [European Regional Development Fund \(ERDF\)](#). Could it help you too? Find out at newanglia.co.uk
